RE: Site Inspection, Body Tody Mill Site, S/015/040, Emery County, Utah

Date of Inspection: November 8, 1990
Time of Inspection: 3:00 - 4:30 p.m.
Attendees: David Taylor, Body Tody; Holland Shepherd, DOGM

I made a stop at the Body Tody mill in Emery to evaluate the type of disturbance it presented and to talk to David Taylor about the operation's progress at the mine site. Mr. Taylor was at the mill, working on the processing of humic shale into fertilizer and a mineral supplement (medicinal) drink made for human consumption.

Mr. Taylor is now the owner of the mine and mill. He has bought the business from Rockwell International; a Tulsa, Oklahoma firm, which initiated the operation. Rockwell still buys products from Body Tody.

The mill is now producing several different products: 1) fertilizer, in solution form; 2) a mineral/nutrient drink, for human consumption; 3) an oil and grease absorbent, which works as a nutrient base for oil consuming bacteria as well as an oil absorbent. The operator is looking for buyers involved in the reclamation field, for his fertilizer product.

The operator has deposited several piles of ore and waste material on site. The material is not extensive, at this time. The operator maintains a large office, warehouse and processing building on site. Several tanks of processing solution and storage tanks of product are located at the mill site. The mill site disturbs about 2 acres of ground.

The county has not asked the operator for a bond as they have other, more recent, operators in this area.
